

Meta-Prompting Guide — Technology PMO

Microsoft Copilot Training | Bajaj Finance Limited

What Is Meta-Prompting?

Instead of writing a prompt yourself, you **ask Copilot to write the prompt for you** — by telling it your role, your task, and what you need.

You are essentially saying:

"You are a prompt expert. You know how to talk to AI. Write me a prompt I can use for my actual work."

The output becomes your **reference prompt** — something you refine and reuse across different projects and situations.

The Core Meta-Prompt Formula

Act as a Microsoft Copilot prompt expert.

I am a [YOUR ROLE] at [COMPANY/CONTEXT].

I need to [WHAT YOU WANT TO DO].

My audience is [WHO WILL READ THE OUTPUT].

Write me a detailed, structured Copilot prompt I can use to complete this task.

The prompt should specify: role, task, context, output format, and tone.

Meta-Prompts for Technology PMO — Bajaj Finance

Use these as your **starting point**. Copy, paste, and run in Copilot. Use the output as your working prompt for your exercises.

1. Project Status Reporting

Act as a Microsoft Copilot prompt expert.

I am a Technology PMO Analyst at Bajaj Finance Limited, an NBFC. I receive raw weekly update notes from squad leads across multiple technology projects. I need to convert these raw notes into a structured fortnightly project status report for senior leadership — including RAG (Red / Amber / Green) status, key risks, and decisions required. My audience is the CTO and Business Heads who want concise, factual updates — not technical detail.

Write me a detailed, structured Copilot prompt I can use to produce this status report. The prompt should specify: my role, the task, what context I will provide, the exact output format I want, and the appropriate tone.

2. Stakeholder Communication — Tailoring by Audience

Act as a Microsoft Copilot prompt expert.

I am a Technology PMO Analyst at Bajaj Finance Limited. I have a full project status report already drafted. I need to extract a short, tailored update from it for a specific senior stakeholder — one who is not technical and cares only

about timelines, budget, and business impact. The update should be 4–5 bullet points, not more than half a page.

Write me a Copilot prompt I can use to produce this tailored communication from an existing status report. The prompt should tell Copilot exactly what to retain, what to drop, and what tone to use for a business (non-technical) audience.

3. Risk and Issue Log Summarisation

Act as a Microsoft Copilot prompt expert.

I am a Technology PMO Analyst at Bajaj Finance Limited. I maintain a project risk and issue log across multiple active programmes. I need to summarise this log for a Steering Committee — grouping risks by severity (Critical / High / Medium), highlighting any issues that are overdue or unresolved, and flagging items that require a governance decision.

Write me a structured Copilot prompt that will produce a one-page risk summary from my raw risk-issue log data. The prompt should specify format (sections, table or bullets), tone (governance-ready), and any prioritisation logic I want applied.

4. Meeting Minutes — Governance Meetings

Act as a Microsoft Copilot prompt expert.

I am a Technology PMO Analyst at Bajaj Finance Limited. After every Steering Committee and Programme Governance meeting, I need to produce formal meeting minutes. I work from rough notes captured during the meeting — bullet points, shorthand, sometimes incomplete sentences. The minutes need to be formal, structured, and ready to circulate within 24 hours of the meeting.

Write me a Copilot prompt I can use to convert rough meeting notes into formal minutes. The prompt should specify the required sections (Attendees, Agenda Items, Decisions Made, Actions with Owner and Due Date), the appropriate formal tone, and instructions for handling unclear or incomplete notes.

5. Capacity Planning and Resource Tracking

Act as a Microsoft Copilot prompt expert.

I am a Technology PMO Analyst at Bajaj Finance Limited. I track engineer capacity across multiple delivery squads each quarter. I have a raw capacity table — squad names, headcount, allocation percentages, and availability gaps. I need to produce a capacity summary that flags over-allocated squads, identifies availability for new project intake, and recommends where to prioritise resourcing decisions.

Write me a Copilot prompt that will produce a PMO capacity planning summary from this raw data. The prompt should specify format (summary paragraph + table), tone (analytical, recommendation-ready), and what signals to surface (critical gaps, reallocation opportunities).

Still Confused? Run This.

If the prompt Copilot wrote doesn't feel right — too generic, wrong format, wrong tone — don't rewrite it yourself. Use this follow-up prompt instead:

The prompt you wrote is a good start, but I need you to adjust it.

Here is what I want to change:

- [Describe what felt off – e.g., "the format doesn't match what my SteerCo expects"]
- [Describe what's missing – e.g., "it doesn't tell Copilot to flag overdue items"]
- [Describe the tone issue – e.g., "it sounds too casual for a governance document"]

Please rewrite the prompt with these corrections.

Keep the same structure (Role / Task / Context / Format / Tone) but fix the parts I've described.

What to Do With the Output

Once Copilot gives you a well-structured prompt:

1. **Read it** — does it reflect your actual role and task?
2. **Replace the placeholders** — swap generic context with your real project data
3. **Run it** — use it on the exercise dataset provided
4. **Save it** — this is your reusable reference prompt for that task type
