

Business Requirements Document – App Adoption (DIY Servicing Feature)

1. Document Header

- Document Title: Business Requirements Document – App Adoption (DIY Servicing Feature)
- Version: 1.0
- Date: 27 May 2026
- Author: Business Analyst
- Status: Draft

2. Executive Summary

The App Adoption feature enables end users to perform DIY servicing activities through the mobile and web application, reducing dependency on manual or assisted service channels. This initiative aims to drive digital adoption, lower operational costs, and improve user experience through self-service capabilities. The expected outcome is increased digital engagement and a measurable reduction in service-related costs.

3. Business Objectives

- Increase app adoption rate among end users by 30% within 6 months of launch
- Reduce assisted customer service requests by 25% within 6 months
- Achieve at least 60% of service requests via self-service channels
- Decrease average service handling cost by 20%
- Improve customer satisfaction (CSAT) for servicing journeys to >85%

4. Scope

In Scope:

- DIY servicing across platforms
- Service request workflows
- Notifications and tracking
- Knowledge base and FAQs

Out of Scope:

- Backend overhaul
- Offline servicing

5. Stakeholders

Stakeholder	Role	Responsibility
Product Manager	Owner	Define roadmap
Engineering	Dev	Build solution
QA	Testing	Quality checks

6. Functional Requirements

- 1. FR-01 | Login and access | High
- 2. FR-02 | Service catalogue | High
- 3. FR-03 | Submit requests | High
- 4. FR-04 | Guided troubleshooting | High
- 5. FR-05 | Track requests | High

7. Non-Functional Requirements

- Performance: <3 sec response
- Security: Encryption + RBAC
- Scalability: 2x user load support
- Availability: 99.5% uptime

8. User Stories

- As a user, I want to view services so that I can resolve issues
- As a user, I want to raise requests digitally
- As a user, I want tracking updates

9. Assumptions & Dependencies

Assumptions:

- Users have access to app
- Backend supports integration

Dependencies:

- API readiness
- UX delivery timeline

10. Risks & Mitigations

Risk	Likelihood	Impact	Mitigation
Low adoption	Medium	High	Awareness campaigns
Tech delays	High	High	Agile rollout

11. Success Metrics

- Adoption rate
- Ticket reduction
- Cost savings
- CSAT score

12. Open Questions

- Priority services?
- Communication channels?
- Compliance constraints?

13. ROI Analysis & Business Justification

13.1 Cost Estimate (One-Time)

Cost Item	Estimated Cost	Notes
Development effort	₹80,00,000	8–10 member team / 4–5 sprints
Infrastructure/tooling	₹15,00,000	Cloud hosting, APIs, licenses
QA & Testing	₹12,00,000	Functional and performance testing
Training & Rollout	₹8,00,000	Internal training, onboarding
Total One-Time Cost	₹1,15,00,000	

13.2 Ongoing Cost (Annual)

Cost Item	Estimated Cost	Notes
Maintenance & Support	₹20,00,000	Bug fixes, enhancements
Infrastructure (run)	₹12,00,000	Hosting and scaling
Total Annual Cost	₹32,00,000	

13.3 Quantifiable Benefits (Annual)

Benefit	Basis of Estimate	Value/Year
Support ticket reduction	25% reduction × volume	₹37,50,000
Operational cost savings	Reduced manual effort	₹30,00,000
Increased digital adoption	Lower servicing cost	₹25,00,000
Faster turnaround	Productivity gains	₹10,00,000
Total Annual Benefit		₹1,02,50,000

13.4 ROI Summary

Metric	Value
Total Investment (Yr 1)	₹1,47,00,000
Total Annual Benefit	₹1,02,50,000
Net ROI (Year 1)	₹-44,50,000
ROI %	-30.27%
Payback Period	~18–20 months

13.5 Qualitative & Strategic Value

- Accelerates digital transformation
- Reduces dependency on manual processes

- Enhances customer experience
- Strengthens competitive positioning
- Enables future automation capabilities

13.6 Assumptions & Caveats

- Costs are indicative and subject to change
- Benefits based on historical servicing data
- ROI excludes indirect benefits like brand value
